Cross-Section

Typical Configuration - Horizontal Unit (H-SYS) With Two Tier

United Medical Hospital System LTD

UMS Vertical units'

Where a large number of services need to be provided at the bed, or where the building form is such that the use of a horizontal type of trunking is impractical, for example where doors and windows cause tortuous trunking routes ,a vertical unit arrangement may be the most suitable means of accommodating them.

Consideration may be given to the use of vertical units that are supplied to site completely wired tubed and factory tested.
